Lean 101*: This course is a basic introduction to Lean Manufacturing and includes a hands-on, interactive simulation that illustrates Lean Principles.

Value Stream Mapping: A valuable mapping technique that allows you to see the sources of waste in your organization and develop plans to achieve a Lean future state.

5S Workshop*: A foundation for the Lean Enterprise. Learn how to apply the basics of visual controls and standard work to achieve improved productivity.

Lean Office: A one-day, interactive training class with simulation to illustrate the application of Lean principles in office and administrative processes.

Kanban Workshop: This workshop teaches the basic principles and tools for setting up pull systems for material flow. Participants will learn how to design the signals, establish supermarkets and control flow through the supply chain.

Quick Changeover Workshop: Through this course, participants will learn how to improve changeover time through the Single Minute Exchange of Die (SMED) technique. This workshop will yield immediate improvements in changeover time and yield improvements in capacity on the first day.

Training Within Industry Workshop: This is a structured, step-by-step training program designed to improve training programs and achieve consistent application of Standard Work in the organization.

Total Productive Maintenance Workshop*: The TPM workshop gives the participants a working knowledge of the TPM philosophy and practical tools for improving Operational Equipment Effectiveness.

Cell Flow Workshop: The Cell Flow workshop provides participants with the knowledge they need to design and implement single-piece flow work cells.

Lean Implementer Certification: This program prepares internal leaders to facilitate and direct a company's Lean initiatives.

Measurable Management®: This course equips front-line managers with tools to engage employees and lead the company in a change that yields measurable results.
